

GET READY FOR DELICIOUS.

For the first time in 20 years, we're putting a tasty new spin on the favourite classics of GC Tooth Mousse™ with a brand new flavour – introducing *Milkshake!*

This creamy, vanilla thickshake flavour contains calcium and phosphate; the major minerals teeth are made from. Because calcium and phosphate are carried in a special milk-derived protein called RECALDENT® (CPP-ACP), they are available in a soluble form. This means GC Tooth Mousse provides extra protection for teeth, buffers dental plaque acid from bacteria in the mouth and protects teeth from acidic foods and drinks.

Get extra protection, every day with GC Tooth Mousse.
